

Gym Operations Platform

Complete Product Specification — Feature-by-Feature Breakdown

Version: 1.1

Date: June 2026

Status: Engineering Ready

Scope: Single product, gym vertical, multi-tenant SaaS

Platforms: Next.js (web) + FastAPI (backend) + Expo (mobile)

Table of Contents

- 1. The Three Money Flows
- 2. Roles & Capabilities
- 3. SaaS Subscription (Platform Revenue)
- 4. Admin Registration Flow
- 5. Admin Login Flow
- 6. Membership Plan Builder
- 7. Org Code Protection
- 8. New Member Signup Flow
- 9. Returning Member Login Flow
- 10. AI Receipt Verification
- 11. Cash Payment Logging
- 12. Existing Member Migration
- 13. Payment Idempotency
- 14. Multi-Gym Membership
- 15. Trainer Salary & Payroll
- 16. Admin Web vs Mobile Split
- 17. End-to-End Walkthroughs
- 18. Open Decisions
- 19. **NEW** Member Engagement & Social Features
- 20. **NEW** Communication Hub
- 21. **NEW** Attendance & Check-In System
- 22. **NEW** Gamification & Rewards
- 23. **NEW** Trainer-Member Interaction
- 24. **NEW** Staff Collaboration Tools
- 25. **NEW** Content & Entertainment
- 26. **NEW** Wellness & Progress Tracking
- 27. **NEW** Community Features
- 28. **NEW** Notification & Alert System
- 29. **NEW** Smart Recommendations

1. The Three Money Flows

1.1 Overview

This is a single product with one mobile app, one web portal, and multiple roles. Built first for gyms. One organization (one gym) per signup. The same person can register multiple gyms separately.

Money flows in two directions for the gym owner: revenue in from members, expense out to trainers. The platform handles both, plus collects its own SaaS fee from the owner.

1.2 Single App, Three Faces

Role	Where They Log In	What They See
Owner / Manager / HR	Web (full power) + Mobile (limited)	Admin dashboard, plans, payroll, refunds, analytics
Trainer / Front Desk	Mobile (primary), web (optional)	Staff dashboard, shifts, tasks, leave
Gym Member	Mobile only	Member dashboard, classes, payments, profile

2. Roles & Capabilities

2.1 Capability Matrix

Capability	Owner	Manager	Trainer	Front Desk	Member
Register gym	✓	—	—	—	—
Create / edit plans	✓	✓	—	—	—
Archive plans	✓	Confirm only	—	—	—
Approve cash receipts	✓	✓	—	✓	—
Process refunds	✓	Limited	—	—	—
Invite members	✓	✓	—	✓	—
Run payroll	✓	—	—	—	—
Toggle gym status	✓	✓	—	✓	—
Assign tasks	✓	✓	To self only	—	—
Log cash payment	✓	✓	—	✓	—
Upload receipt proof	—	—	—	—	✓
Book classes	—	—	—	—	✓
Check in for shift	—	—	✓	✓	—
View revenue analytics	✓	✓	—	—	—

3. SaaS Subscription (Platform Revenue)

3.1 SaaS Tiers

Tier	Price	Member Cap	Use Case
Starter	\$29/month	Up to 25	Small gyms, single trainer, simple ops
Pro	\$79/month	Up to 100	Growing gyms, multiple trainers, payroll, advanced analytics
Enterprise	Custom	Unlimited	Multi-trainer gyms, mandatory MFA, dedicated support

3.2 Tier Selection at Registration

Owner picks a tier as the final step of registration. **No free tier.** The chosen tier is stored on the organization and gates feature access.

3.3 First-Month Charge

On registration, the platform's Stripe account charges the owner's card immediately for the first month. **Failure rejects the registration.** Success creates the organization.

3.4 Recurring Monthly Charge

Stripe auto-charges the same card every 30 days. Receipt emailed. Invoice stored.

3.5 Failed Charge Handling

Day	Action
0	Owner notified by email + push
1, 3, 5	Stripe retries automatically
6	Grace ends. Org enters read-only mode —no plan edits, no new signups, no payroll runs. Existing members still use the app.
30	Org suspended fully . Members locked out.
90	Data archived if not reactivated.

3.6 Upgrade

Immediate, prorated. New features unlock instantly. New tier becomes recurring amount from next cycle.

3.7 Downgrade

Scheduled for next cycle. **Blocked if current usage exceeds the lower tier limit** (must reduce members first).

3.8 Cancellation

Owner cancels from billing settings. Org runs until end of current paid period. 90-day data retention. After that, data archived.

3.9 Invoice History

Every invoice listed with date, period, tier, amount, taxes, payment method, status. Each downloadable as PDF.

3.10 Tax Handling

Stripe Tax calculates sales tax / VAT based on billing country. Shown as separate line on invoice.

4. Admin Registration Flow

4.1 Entry Point

First screen presents three buttons:

- **Register My Gym**
- **Join an Existing Gym**
- **I already have an account**

Owner picks **Register**.

4.2 Step 1 — Owner Account

Fields: Full name ·Email ·Password ·Confirm password

Password Rules:

- 12+ characters
- Mixed case, numbers, symbols
- Checked against Have I Been Pwned API — rejects known-compromised passwords
- Email cannot already be used as another owner account

4.3 Step 1.5 — Email Verification

- System sends 6-digit code to email
- Code expires in 10 minutes, single-use
- Owner enters code → email marked verified
- **Resend rate-limited:** max 3 per hour per email

4.4 Step 2 — Gym Details

Fields: Gym name ·Industry type (Gym/Fitness preselected) ·Address ·Country ·Timezone ·Default currency ·Working hours per day of week ·Logo upload ·Accent brand color

4.5 Step 3 — SaaS Tier Selection

Three tier cards shown side by side. Each shows price, member cap, key features. Owner picks one. Total (including taxes) displayed before payment step.

4.6 Step 4 — Payment for SaaS

Owner enters card via Stripe-hosted secure form. Stripe charges the first month immediately.

- **Success** → organization created
- **Failure** → error shown, retry allowed

4.7 Organization Provisioning

On successful payment, the system:

1. Creates a new Organization record with tenant-isolated `organization_id`
2. Generates a unique org code (8–12 alphanumeric chars, e.g., `IRON-PULS-3K9`)
3. Creates the owner's user account with Owner role
4. Sends welcome email with web login URL, org code, mobile app links, getting-started guide

4.8 Setup Checklist

Owner lands on admin dashboard with a prominent checklist. **Member signup is blocked until critical items are complete.**

4.9 Stripe Connect Onboarding

Owner clicks “Connect Stripe” → redirected to Stripe Connect onboarding. Enters business info, bank details, ID verification. Once approved by Stripe, the gym can receive member payments directly into its own bank account. **Platform does not touch the money flow between members and gym.**

5. Admin Login Flow

5.1 Web Login — Standard

Flow: Web portal URL → enter email + password → system validates credentials and org membership → JWT issued (15-min access token, 7-day refresh token, HTTP-only cookie) → land on admin dashboard.

5.2 Web Login — Multi-Org Owner

If user is admin of multiple orgs, after login they see an **org picker**. Selection scopes the JWT to that org. Switching orgs requires fresh authentication or token refresh bound to the new org.

5.3 Mobile Login — Method A: Email + Password

Owner opens mobile app → taps “I’m an Admin” → enters email + password. Same authentication as web; identical privileges. App receives JWT tokens, opens WebSocket for real-time updates.

5.4 Mobile Login — Method B: Org Code + Magic Link

Owner taps “Use Org Code” instead of password → enters org code + email → system verifies email belongs to an admin of that org → sends magic link to email (single-use, 15-min expiry) → owner taps link on same phone → deep link opens app, authenticates automatically. Expired/failed links redirect to email/password fallback screen.

5.5 Multi-Factor Authentication

- **Optional** for Starter and Pro tiers
- **Mandatory** for Enterprise tier
- Supported methods: TOTP authenticator app, SMS one-time code
- Triggered after password (or magic link), before JWT issuance

5.6 Remember This Device

On a trusted device, owner can opt to remember for 30 days. Token validity extends to 30 days. **Sensitive actions** (password change, MFA toggle, refunds, data export) still require re-auth.

5.7 Failed Login Handling

- 5 attempts per 15 minutes per IP with exponential backoff
- After 10 failures, account locked for 30 minutes
- Account-lock email sent

5.8 Password Reset

Owner clicks “Forgot Password” → enters email → receives time-limited (1 hr) signed link → link is single-use, invalidated upon password change or new reset request.

5.9 Session Management

Every active session tracked centrally: device type, OS, anonymized IP, last activity timestamp. Owner can view all sessions in Security Settings. Any session can be revoked, immediately invalidating its refresh token.

6. Membership Plan Builder

Critical Constraint: The setup checklist blocks member signup until at least one published membership plan exists. Plans are **100% owner-defined**, not chosen from platform presets.

6.1 Plan Builder — Basics

- **Plan name** — internal and customer-facing
- **Public description** — members see this on the signup screen
- **Internal notes** — only admins see
- **Save Draft** at any point — drafts don’t appear in member signup

6.2 Plan Builder — Pricing

- Price
- Currency (defaults to org currency)
- Tax handling: inclusive in price, or added on top
- Tax rate (if added on top)

6.3 Plan Builder — Billing Type

Type	Behavior	Owner Configures
Recurring	Auto-renews on cycle	Cycle length + unit, auto-renew default, trial period
One-time pack	Paid once, N classes valid for N days	Pack size, validity window
Drop-in	Pay per visit, no commitment	Single-use price

6.4 Plan Builder — Inclusions

- Class access: unlimited / limited count per period / specific class types only
- Time restrictions: all hours / peak only / off-peak only
- Guest passes per month
- Personal training discount (%)

6.5 Plan Builder — Rules

- Minimum commitment period (months)
- Cancellation notice required
- Early cancellation fee
- Booking window — how far ahead members can book
- Late cancellation fee + threshold (e.g., \$10 if cancelled less than 12 hrs before class)
- No-show fee
- Freeze policy — allowed, max freeze days, freeze fee

6.6 Plan Builder — Visibility

Visibility	Behavior
Public	Shown on signup screen
Members-only	Only existing members can upgrade to it
Invite-only	Hidden, accessible via direct link

6.7 Plan Management Actions

Action	Effect
Edit price	Existing members keep old price. New price applies to new members only.
Pause sales	Disappears from signup. Existing members unaffected.
Resume sales	Reappears on signup.
Duplicate	Copies fields to a new draft, ready to edit.
Archive	Hidden everywhere. Existing members migrated to chosen replacement at next renewal.

7. Org Code Protection

The org code is **not a secret**. It's printed on flyers, said in emails, shown publicly. What stops abuse is **layered defense**, not secrecy.

7.1 Enrollment Modes

Mode	Behavior	Best For
Open	Anyone with code can sign up and pay immediately.	Public gyms with foot traffic.
Approved	Anyone with code can request to join. Admin approves before they can pay.	Private gyms, premium clubs.
Invite-only	Code disabled. Members can only join via direct email invitations.	Corporate gyms, members-only clubs.

7.2 Rate Limiting

- **Per IP:** max 3 signup attempts per hour
- **Per email:** max 2 signup attempts per day
- **Per org code:** max 50 new signups per day. If exceeded, code auto-frozen until admin reviews.

7.3 CAPTCHA

hCaptcha or Cloudflare Turnstile on signup. Blocks automated bot attacks. Real users barely notice.

7.4 Email Verification Before Payment

Members cannot pay or access anything until their email is verified with a 6-digit code. Stops fake / disposable emails at the gate.

7.5 Org Code Rotation

Owner can rotate the code from Security Settings. Old code stops working instantly. Active sessions authenticated via old code are revoked. New code shown to owner to share with trusted members only.

7.6 Signup Audit Feed

Admin sees a feed of recent signups with status: succeeded ·payment pending ·abandoned ·suspicious. Suspicious entries (disposable email, multiple from same IP) are flagged with one-click block / ignore actions.

8. New Member Signup Flow

8.1 Sequence (Open Enrollment)

```
App opens
↓
"Join an Existing Gym"
```

```
↓
Enter org code → Rate limit + CAPTCHA check
↓
Enter email → 6-digit email verification (10-min expiry)
↓
Set password
↓
Pick a published plan
↓
Pay → Idempotency key generated client-side
    Server processes via Stripe
    Membership activated
↓
Complete profile (name, photo, phone, emergency contact)
↓
Land on member dashboard
```

8.2 Step-by-Step

Step 1 — Org Code Entry

Prospect enters the gym's org code. System validates code exists, org is accepting signups in current enrollment mode. Invalid → error. Valid → proceed.

Step 2 — CAPTCHA

Bot challenge before continuing. Real users pass instantly.

Step 3 — Email

Enter email. System checks email isn't already a member of this org (if yes → redirect to login). If no → send 6-digit verification code. Enter code, expires in 10 min.

Step 4 — Password

Member creates password (same complexity as admin: 12+ chars, mixed case, numbers, symbols). Account created in `pending_payment` state.

Step 5 — Pick Plan

Member sees all of owner's published plans (public visibility). Each card shows name, price, billing type, key inclusions. Featured plan highlighted. Member picks one.

Step 6 — Payment

Stripe-hosted card form. Client generates idempotency key, stores locally. Server processes payment idempotently (no double-charge on retries). Success → account moves to `active`, membership created, member logged in.

Step 7 — Profile Setup

Member fills: name (required), photo, phone, emergency contact. Required vs optional configurable per org.

Step 8 — Welcome

Member lands on dashboard. Welcome email sent. Member appears in admin’s Member Directory marked Active.

8.3 Approved Enrollment Variant

In Approved mode, after Step 4 (or Step 5, configurable), the prospect’s signup goes to an admin approval queue. Admin sees email, claimed name, any extra info. Admin approves or rejects. On approval, prospect notified and can proceed to payment.

8.4 Invite-Only Variant

“Join an Existing Gym” with a code is disabled. Prospect must receive a direct invite from admin. Invite contains a single-use code tied to their email.

9. Returning Member Login Flow

9.1 Login Sequence

9.2 Tenant Isolation Check

The JWT is scoped to a single `organization_id`. Every API request server-side checks: the JWT’s org must match the data being accessed. Members cannot cross orgs via crafted requests. Row-level security at the database is a second defense.

9.3 Membership Status States

Status	Member Can	Member Cannot
Active	Full app access	—

Table 9 – continued

Status	Member Can	Member Cannot
Grace period	Open app, see schedule, see existing bookings	Book new classes
Expired	Log in only	Access dashboard until payment proven
Frozen	Open app, unfreeze	Book classes, get billed
Cancelled	Re-signup as new	Anything else
Banned	Nothing	Log in

9.4 Expired Member Flow

If status is Expired, member is routed to a **Payment Required** screen:

Membership Payment Required

Your last payment was on Feb 5.
Your plan expired on Mar 5.

How would you like to resolve this?

[Pay \$149 Online Now]

[I paid offline — Upload Receipt]

9.5 Grace Period Behavior

- 3-day grace window after expiry
- Member can open app, see dashboard
- Persistent banner: “Payment due. X days left.”
- Existing bookings remain valid
- Cannot book new classes
- Email + push reminders on days 1, 2, and morning of day 3

10. AI Receipt Verification

10.1 Entry Points

1. Returning expired member taps “I paid offline” on Payment Required screen.
2. Active member uploads a receipt for a payment not yet logged by front desk.

10.2 Upload Flow

Upload: Member takes photo from camera or picks from gallery. Brief instructions: “Make sure the receipt shows amount, date, and gym name clearly.” Max 10 MB, formats: JPG / PNG / PDF.

Pre-processing: System rotates if needed, crops to detected receipt boundaries, enhances contrast. Saves original + processed image.

10.3 AI Pipeline

Step 1: OCR Extraction	
• Amount paid	
• Date	
• Payer name (if printed)	
• Payee / gym name	
• Transaction ID	
• Payment method	
Step 2: Authenticity Check	
• Font consistency	
• Edit marks / pixelation	
• EXIF data integrity	
Step 3: Duplicate Detection	
• Perceptual hash vs all prior receipts in this org	
Step 4: Cross-Field Validation	
• Amount matches a known plan?	
• Date is within claim window?	
• Gym name matches org?	
• Receipt # used before?	
Step 5: Confidence Score (0-100%)	

10.4 Decision Thresholds

Confidence	Routing	Member Experience
95%	Auto-approve. 5% random spot-audit later.	Instant activation. “Membership active.”
70 -94%	Admin review queue with AI’ s extracted data and confidence shown.	“Your receipt is being reviewed. You’ ll hear back within 24 hours.”
< 70%	Admin queue, flagged suspicious with reasons.	Same review message.

10.5 Admin Review Queue

Admin sees each pending receipt with: member info, claimed amount, AI confidence score, AI-extracted fields, original image. One-click actions: **Approve** / **Reject (with reason)** / **Request more info**.

10.6 Random Spot Audit

A background job picks 5% of auto-approved receipts weekly and surfaces them to admin for review. Admin doesn't have to act, but can reverse an approval if AI got it wrong — member's status reverts and they're notified.

10.7 Audit Log

Every receipt action logged: upload time, AI verdict, admin actions, final outcome. Used for disputes and AI tuning.

11. Cash Payment Logging

Front-desk logging is the primary path for cash. Member receipt upload is the fallback when staff forgets or member pays the owner directly.

11.1 Front Desk Logging

Step 1: Staff with Front Desk role opens admin mobile app or web. Picks “Log Cash Payment”.

Step 2: Searches member by name, email, or phone. Selects correct member.

Step 3: Enters: amount, plan being paid for, payment method (cash / bank transfer / mobile wallet), date, optional note.

Step 4: Confirms. Payment record created with `logged_by = staff_user_id` and `method = cash`. Member's status updates to Active immediately.

Step 5: Receipt PDF auto-generated and emailed to member. Member also sees it in Payment History.

Step 6: Member receives push notification: “Your payment of \$149 has been recorded. Membership active until April 1.”

11.2 End-of-Day Cash Reconciliation

Admin or designated staff runs reconciliation. System shows total cash payments logged that day. Staff counts actual cash and enters count. Any discrepancy is flagged with staff member's name for audit.

12. Existing Member Migration

12.1 CSV Bulk Import

Step 1 — Upload: Owner navigates to Member Directory → “Import Members”. Uploads CSV.

Step 2 — Template: Downloadable template specifies columns. **Required:** email, name, plan name. **Optional:** join date, last payment date, last payment amount, payment method, phone, emergency contact, notes.

Step 3 — Validation: System checks: required columns present, valid emails, plan names match existing plans, dates correct, no duplicates, emails not already in this org. Errors shown row-by-row.

Step 4 — Preview: Admin sees: total members to create, plan distribution, warnings. Confirms.

Step 5 — Account Creation: System creates each member's account with status = `pending_activation`. Payment history pre-populated.

Step 6 — Activation Email: Each imported member receives activation email with single-use token (7-day expiry).

Step 7 — Member Activation: Member taps link, downloads app, sets password, completes profile. Pre-populated payment history preserved.

12.2 Receipt Activation Path (Fallback)

If a member's activation email expires or is lost, they can activate by entering the org code as a new member, then uploading their last receipt. AI matches the receipt to the imported record and merges the accounts.

13. Payment Idempotency

13.1 The Problem

User taps Pay. Phone loses signal. User taps Pay again. Without idempotency, the gym charges them twice.

13.2 The Failure Modes

Failure Mode	What Happened	What We Want
A —Request never reached server	Network died before request left	Process the payment normally on retry
B —Server processed but response lost	Card charged, DB updated, response packet dropped	Return success on retry (no re-charge)
C —Server crashed mid-processing	Card maybe charged, state unclear	Reconcile with Stripe, return correct answer
D —User double-tapped button	Two requests in flight simultaneously	Second request waits or returns first result
E —App reinstall lost local key	New attempt with no memory of prior	Server-side de-dup window catches it

13.3 Client-Side Flow

13.4 Server Idempotency Check

- If key **never seen** → claim it, mark **in_progress**, process the payment
- If key marked **completed** → return cached result
- If key marked **in_progress** → return 409 Conflict, retry later
- If key marked **failed** → return cached failure

13.5 Request Body Hash Check

Along with the key, server stores hash of the request body. If a future request arrives with the same key but different body, it's rejected as tampered (someone trying to replay with modified parameters).

13.6 Stripe Idempotency Layer

Server passes the same key to Stripe in the **Stripe-Idempotency-Key** header. Even if our server forgets it called Stripe (post-crash), Stripe remembers and won't double-charge.

13.7 Stuck-Payment Reconciliation Worker

Background worker runs every few minutes. Finds records stuck in **in_progress** over 30 seconds. For each:

- Query Stripe with the idempotency key
- If Stripe shows succeeded → mark complete, create payment record, update membership
- If Stripe shows failed or doesn't exist → mark failed

13.8 Idempotency for Other Operations

Same pattern applies to: class bookings, refunds, member invitations, plan archival, payroll runs. **Every state-changing endpoint requires an Idempotency-Key header.** GET reads don't need it.

13.9 UI Defense Against Double-Tap

Pay button disabled immediately upon first tap. Re-enabled only after response received. Catches the most common case before it reaches the server.

14. Multi-Gym Membership

14.1 Multi-Org User Model

One user account (one email) can be a member at multiple gyms. Each membership is independent: different plan, different status, different payment history, different billing cycle, paid into different Stripe accounts.

14.2 Org Switcher in App Header

14.3 Switch Behavior

1. Current session invalidated
2. App re-authenticates against target org
3. JWT reissued with new `organization_id`
4. App reloads with target org's data, branding, accent color

14.4 Visual Org Context

Current org's branding is prominent: logo top-left, accent color across the UI, gym name in greetings. Persistent banner ensures member never confuses which gym they're looking at.

14.5 Re-Auth on Stricter Security

If target org has stricter policies (mandatory MFA, biometric required), switching triggers a re-auth challenge before switch completes.

14.6 Independent Tenant Isolation

Row-level security applies. Even with multi-org membership, each org's data is isolated. Query made in context of Org A cannot read Org B's data.

15. Trainer Salary & Payroll

15.1 Compensation Setup per Trainer

Per trainer, owner configures pay structure with one or more components **stacked**:

Component	Example
Fixed monthly salary	\$1,500/month base
Hourly rate	\$25/hour for tracked hours
Per-class rate	\$30 per class taught
Commission rate	5% of revenue from members they referred or train

15.2 Auto-Calculations

Component	Calculated From	Notes
Hours	Staff check-in / check-out logs	Distinguishes regular, overtime, weekend rates
Class count	Class schedule $\times$ attendance logs	Only classes where trainer actually checked in count
Commission	Members linked to trainer $\times$ their payments	Attribution window: first 12 months

15.3 Payroll Run Sequence

Step 1 — Auto-generate draft

At end of pay period, system generates a draft payroll for all active staff. Each trainer: fixed + hourly + classes + commissions – deductions = net pay.

Step 2 — Adjustments

Owner reviews. Adds bonuses, edits deductions, corrects errors. **Each manual change requires a note (audit trail).**

Step 3 — Bonus / Deductions

Recurring bonuses auto-applied (e.g., \$100 for 100% attendance). Recurring deductions (advance repayments, equipment damage) auto-applied until total reached.

Step 4 — Review

Owner sees total cost, per-trainer breakdown, deductions. Locks payroll on Finalize. No more edits.

Step 5 — Pay Stubs

Per-trainer PDF generated showing pay period, components, deductions, net pay, payment method. Emailed to trainer and stored in their app under Pay History.

Step 6 — Payment Execution

Method	How It Works
Bank transfer	System generates bulk bank transfer file (CSV) for owner to upload to banking portal
Cash	Owner records cash payout; trainer confirms receipt in-app; counts toward cash drawer reconciliation
Mobile wallet	Owner initiates payout; system logs

15.4 Advance Requests

Trainer requests pay advance from mobile. Owner approves with repayment schedule. Advance paid out and auto-deducted from subsequent pay runs.

15.5 Year-End Summary

Per-trainer summary document showing total earnings broken down by component. Used for trainer's tax filing and owner's accounting.

16. Admin Web vs Mobile Split

16.1 Web (Full Power)

Web portal is the command center. Every feature available:

- Plan creation and editing
- Member management (bulk imports, deactivations)
- Payroll runs and adjustments
- Refund processing
- Role and permission configuration
- Stripe configuration
- Full analytics with charts and exports
- Audit logs (full searchable)
- Security settings (sessions, MFA enforcement, code rotation)

16.2 Mobile (Limited Quick Actions)

Mobile is for on-the-go reaction, not configuration:

- Approve / reject pending items (leave, receipts, applications) with swipe gestures
- Toggle gym status (Open / Closed / Half-Day)
- Create simple tasks (title + assignee + deadline)
- Search and view member profiles
- Send quick text-only announcements
- Headline analytics only (today's check-ins, today's revenue, pending counts)

16.3 Explicitly Not on Mobile

Deliberate restrictions for safety and clarity. From mobile, admin cannot:

- Create or edit plans
- Process refunds
- Run payroll
- Edit roles
- Bulk-import members
- Change Stripe configuration
- View full audit logs
- Archive plans
- Change security policies

Any attempt shows: **“This action is available on the web portal.”**

16.4 Real-Time Sync

Actions on web reflect on mobile within 2 seconds via WebSocket (and vice versa). Owner can start work on web, react to notifications on mobile, no inconsistency.

17. End-to-End Walkthroughs

17.1 Owner First Day — Iron Pulse Boxing Goes Live

Time	Action	Result
00:00	Alex downloads the app, taps “Register My Gym.”	—
00:01	Enters name, email, password. Receives 6-digit code, enters it.	Account created, email verified

Table 15 – continued

Time	Action	Result
00:02	Enters gym details: Iron Pulse Boxing, NY, USD, 5 AM -10 PM Mon-Fri.	Org record created
00:03	Picks Pro tier (\$79/mo). Enters card. Charged \$79.	Org active. Code: IRON-PULS-3K9
00:04	Lands on dashboard. Sees setup checklist.	Connect Stripe, Create plans
00:05	Clicks “Connect Stripe.” Completes Stripe Connect onboarding (bank, ID).	<code>stripe_connect_status = active</code>
00:08	Clicks “Create Membership Plans.” Builds three plans: Monthly \$149, 10-pack \$200, Drop-in \$25. Publishes all.	Member signup unblocked
00:15	Sets enrollment mode to Open. Generates 12 invite codes for trainers, texts them.	Gym live
00:20	Configures office statuses, leave types, working hours.	—
00:25	Imports 200 existing members via CSV. Each receives activation email.	Members pending activation
00:30	Gym is live. Setup complete.	—

17.2 Member Sarah’s Day — New Signup

Time	Action	Result
Morning	Sarah sees Iron Pulse flyer with IRON-PULS-3K9. Downloads app.	—
+ 1 min	Taps “Join an Existing Gym.” Enters code, passes CAPTCHA.	Org validated
+ 2 min	Enters email, receives 6-digit code, verifies. Sets password.	Account pending payment
+ 3 min	Sees three plans. Picks Monthly \$149.	Plan selected
+ 4 min	Enters card. Payment processes idempotently. Charged \$149 (Stripe deposits to Iron Pulse’s bank).	Active until next cycle
+ 5 min	Profile setup: name, photo, phone, emergency contact.	Profile complete
+ 6 min	Lands on member dashboard. Sees today’s classes, gym status. Books 6 PM Boxing Fundamentals.	Booking confirmed. Push sent.

17.3 Returning Member Renewal — Cash Path

Date	Actor	Action	Result
Apr 1	System	Sarah' s membership expired Apr 1.	Status → expired
Apr 3	Sarah	Paid Alex \$149 cash.	Alex forgets to log
Apr 5	Sarah	Opens app, taps Log In. Enters credentials. Status = Expired.	Routed to Payment Required screen
Apr 5	Sarah	Taps “I paid offline —Upload Receipt.” Snaps photo of cash receipt.	Receipt queued for AI
Apr 5	System	AI extracts: \$149, Apr 3, Iron Pulse Boxing, Sarah Chen. Cross-checks against Monthly plan (\$149) and claim window (this month). Confidence: 96%.	—
Apr 5	System	Auto-approves.	Sarah' s membership reactivated. Active until May 5.
Apr 5	Sarah	Lands on dashboard. Books a class.	—
Apr 5	Alex	Gets notification: “Sarah Chen' s receipt auto-approved. Audit available in admin panel.”	—

17.4 Trainer Marcus's Day — Payroll Run

Frequency	Actor	Action	Result
Daily	Marcus	Checks in via mobile app at start of shift. Checks out at end.	Hours auto-logged
Weekly	Marcus	Teaches 12 classes (Mon/Wed/Fri 6 AM + 6 PM).	Attendance recorded
End of month	Alex	Opens Payroll. System has auto-generated draft: Marcus = \$1,500 base + 48 classes × \$30 = \$2,940 gross. Subtracts \$200 advance repayment. Net = \$2,740.	Draft ready

Table 18 – continued

Frequency	Actor	Action	Result
End of month	Alex	Adds \$100 bonus for retention milestone. Net = \$2,840. Adds note: “Q1 retention bonus.”	Adjustment logged
End of month	Alex	Finalizes payroll. Pay stubs generated. Bank transfer file downloaded. Uploads to bank portal.	Payroll finalized
End of month	Marcus	Receives email with PDF pay stub. Sees same in app under Pay History.	—

17.5 Cross-Gym Sarah

Time	Action	Result
Year later	Sarah moves to a new neighborhood. Joins CrossFit Westside (uses same platform).	Same email, new org code. System detects existing user, links second membership.
Daily use	Sarah opens app, taps org switcher in header. Sees both gyms. Switches between them. UI re-themes per gym.	Independent memberships, independent billing

18. Open Decisions

Decide before engineering starts. These items have no defensible default — they depend on your business choices and legal context.

18.1 Trainer Commission Attribution

When a member churns, refunds, or switches plans, what happens to commission already paid to the trainer who acquired them?

Option	Description	Recommendation
Strict window	Commission only on member’s first 12 months.	 Recommended. Easy to explain to trainers, easy to compute, no clawback drama.
Full lifetime	Trainer earns as long as member stays.	Generous, complicated reconciliation.
Clawback	Commission paid out, clawed back if member refunds within 90 days.	Most accurate, hardest to operate.

18.2 Cash Handling Audit Risk

Problem: Front desk logs cash payment in the system, but actual cash can disappear into a pocket. The system shows revenue that doesn't exist in the drawer.

Mitigation: Daily cash reconciliation is mandatory, with a named staff member accountable. Discrepancies logged. Owner sees a weekly report of discrepancies by staff member. Three discrepancies in 30 days triggers a flag.

18.3 AI Receipt Confidence Threshold (95%)

95% is the starting threshold but the real number must be tuned from production data. Without real receipts, we don't know the actual false-positive rate.

Plan: Start at 95%. Monitor weekly the rate of admin reversals on auto-approved receipts. If reversal rate > 2%, raise threshold to 97%. If reversal rate < 0.2% and admin queue is backed up, lower to 92%. Tune monthly until stable.

18.4 Stripe Connect Model

For now, the plan assumes **Stripe Connect Standard** — money flows directly to each gym's Stripe account, platform takes only SaaS subscription. No platform fee on member transactions. This keeps the platform out of merchant-of-record territory and avoids PCI scope expansion.

Switching to Stripe Connect Express (platform as merchant of record, takes a per-transaction fee) is a **Phase 2+ decision** once volume justifies the compliance overhead.

18.5 Refund Authority on Mobile

Currently mobile cannot process refunds. This is deliberate (financial actions require web).

Open question: Should there be a hard \$-cap below which mobile refunds are allowed (e.g., \$50)? Useful for front desk during disputes.

Recommendation: No mobile refunds in v1. Add small-cap mobile refunds in v1.1 once usage patterns stabilize.

19. Member Engagement & Social Features

19.1 Activity Feed & Social Timeline

What it is: A personalized social feed inside the member app showing gym activity, achievements, and community updates.

How it works:

- Members see an “Activity” tab on their dashboard
- Feed shows: class bookings by friends, achievement unlocks, gym announcements, trainer spotlights, challenge progress
- Members can like and react to posts (emoji reactions: 🏽💪🎉👏)

- Members can comment on public posts (trainer announcements, gym events)
- Feed is filtered by gym (no cross-gym pollution)

Why it keeps users sticky: Creates FOMO. When Sarah sees Marcus just hit 50 classes, she books one too. Social proof drives attendance.

19.2 Friend Connections & Gym Buddy System

What it is: Members can find and connect with other members at the same gym.

How it works:

- Members opt-in to “Find Gym Buddies” (privacy-first, off by default)
- Search by name or browse “Members at this gym”
- Send connection request (like LinkedIn)
- Once connected, see each other’s:
 - Class schedules (if shared)
 - Attendance streaks
 - Achievement badges
 - Workout preferences
- Book classes together — “Join Sarah for 6PM Boxing” button
- Get notified when a gym buddy books a class you’re interested in

Privacy controls:

- Members choose what to share: schedule, stats, achievements, or nothing
- Can block or remove connections anytime
- Gym owner can disable buddy system entirely in settings

Why it keeps users sticky: Accountability partners increase retention by 40%. Members with gym buddies attend 2.3x more classes.

19.3 Class Ratings & Reviews

What it is: Members rate and review classes they’ve attended.

How it works:

- 15 minutes after class ends, member gets push: “How was Boxing Fundamentals with Marcus?”
- 1-5 star rating + optional text review
- Reviews are anonymous to other members but visible to trainers and admins
- Trainer sees average rating, recent reviews, trend over time
- Admin sees gym-wide class ratings to identify popular/unpopular offerings
- Top-rated classes get “ Member Favorite” badge on booking screen

Why it keeps users sticky: Feedback loop improves class quality. Members feel heard. Trainers compete for better ratings.

19.4 Workout Check-In & Social Proof

What it is: Members check in when they arrive at the gym, visible to their gym buddies.

How it works:

- Member opens app at gym → “Check In” button (geofenced or QR code at reception)
- Check-in posts to activity feed: “Sarah just checked in at Iron Pulse Boxing 🔥”
- Gym buddies get push notification (if enabled)
- Streak counter: “You’re on a 5-day streak! Keep it up 💪”
- Gym leaderboard: “Most check-ins this week” — top 10 members
- Monthly “Gym Warrior” badge for most check-ins

Why it keeps users sticky: Gamification of attendance. Streaks create habit loops. Leaderboards tap competitive drive.

20. Communication Hub

20.1 In-App Messaging (Member Trainer)

What it is: Direct messaging between members and their assigned trainers.

How it works:

- Member opens trainer’s profile → “Message” button
- Chat interface: text, photos, voice notes
- Trainer sees all member messages in a unified inbox
- Admin (owner/manager) can view all conversations for quality control
- Messages are org-scoped (no cross-gym messaging)

Use cases:

- Member: “Can we reschedule my PT session?”
- Trainer: “Great work today! Here’s your homework: 3 sets of planks”
- Member sends form check video
- Trainer sends nutrition tip or motivational message

Notifications:

- Push notification for new messages
- Badge count on app icon
- Email digest of unread messages (daily, optional)

Why it keeps users sticky: Personal connection with trainer increases retention. Members feel supported, not just processed.

20.2 Trainer Broadcast Messages

What it is: Trainers can send announcements to all their members or specific groups.

How it works:

- Trainer composes message: text + optional image/video
- Select audience: all members, specific class attendees, or individual members
- Schedule send or send immediately
- Members receive as push notification + in-app message
- Delivery tracking: seen by X of Y members

Use cases:

- “New 6AM class starting Monday! Who’s in?”
- “Gym closed this Sunday for maintenance”
- “Congratulations to everyone who completed the 30-day challenge!”
- “Reminder: Bring water bottles — it’s going to be intense 🔥”

Why it keeps users sticky: Direct line to members. Feels personal, not corporate. Drives class attendance.

20.3 Group Chat by Class

What it is: Auto-created group chat for everyone booked into a specific class.

How it works:

- When member books a class, they’re added to that class’s group chat
- Chat active 24 hours before class until 2 hours after
- Members can coordinate: “Who’s bringing the extra mats?”
- Trainer can drop pre-class motivation or post-class recap
- Photos from class can be shared (with consent)
- Chat archives after class, searchable in history

Privacy:

- Members can mute class chats
- Opt-out of group chats in settings
- Trainer can disable for specific classes

Why it keeps users sticky: Community building. Members make friends. Missing a class means missing the group energy.

20.4 Admin Announcements & Notifications

What it is: Owner/manager sends announcements to all members, staff, or specific segments.

How it works:

- Compose: text + rich media (images, videos, PDFs)
- Target: all members, active members only, expired members, specific plan holders, staff only
- Schedule or send now
- Delivery: push notification + in-app banner + email (optional)
- Read receipts: who opened, who didn't
- Pin important announcements to top of member dashboard

Use cases:

- "Holiday hours: Closing early Dec 24"
- "New equipment arrived! Try the new rowing machines"
- "Flash sale: 20% off next month's membership"
- "Congratulations to our member of the month: Sarah Chen!"

Why it keeps users sticky: Members feel informed and valued. Not just a number in a system.

21. Attendance & Check-In System

21.1 Member Self Check-In

What it is: Members check themselves in when arriving at the gym.

How it works:

- Member opens app at gym location
- "Check In" button appears (geofenced to gym address, 200m radius)
- Alternative: QR code scan at reception desk
- Check-in records: timestamp, location verification, member ID
- Member sees confirmation: "Checked in at Iron Pulse Boxing, 6:02 PM"
- Streak counter updates
- Gym buddy notifications sent (if enabled)

Check-in limits:

- Max 1 check-in per day (configurable per gym)
- Must be within gym operating hours
- Cannot check in if membership expired or frozen

21.2 Trainer-Led Class Check-In

What it is: Trainer checks in members as they arrive for class.

How it works:

- Trainer opens “My Classes” → selects upcoming class
- Sees roster: booked members with check-in status
- As members arrive, trainer taps their name → “Check In”
- Late arrivals flagged: “ 10 min late”
- No-shows auto-marked 15 minutes after class start
- Check-in data feeds: attendance analytics, payroll (per-class rate), member engagement scoring

Member view:

- Member sees “You’re checked in for 6PM Boxing” on dashboard
- Push notification: “Class starts in 15 minutes! Don’t be late 💪”

21.3 Attendance Analytics

What it is: Insights for members and admins about attendance patterns.

Member-facing:

- Personal attendance calendar (green = attended, red = no-show, gray = cancelled)
- Monthly attendance rate: “You attended 18 of 20 booked classes (90%)”
- Streak tracking: “🔥 12-day streak! Personal best!”
- Attendance goals: “Goal: 20 classes this month. You’re at 16.”

Admin-facing:

- Gym-wide attendance heatmap (which hours/days are busiest)
- Class fill rates: “Boxing Fundamentals: 85% average fill”
- Member attendance risk score: flags members who haven’t checked in for 14+ days
- Trainer attendance correlation: which trainers have highest member retention

Why it keeps users sticky: Members see their progress. Goals create commitment. Streaks create habits.

21.4 Absence & Leave Management (Staff)

What it is: Trainers and front desk request time off through the app.

How it works:

- Staff opens app → “Request Leave”
- Select dates, type (sick, vacation, personal), optional note
- Submits to owner/manager for approval
- Owner sees request in notification center + email

- Approves/rejects with optional note
- If approved, system:
- Blocks that staff from being assigned classes during leave
- Notifies affected members if classes need rescheduling
- Updates payroll (unpaid leave deduction if applicable)

Leave types configurable per gym:

- Paid vacation
- Sick leave
- Personal day
- Bereavement
- Unpaid leave
- Custom types

Why it keeps staff sticky: Professional tool. Staff feel their time is valued. Reduces scheduling conflicts.

22. Gamification & Rewards

22.1 Achievement Badge System

What it is: Members earn digital badges for milestones and accomplishments.

How it works:

- Badges automatically awarded based on platform data
- Badge appears on member profile, shareable to social media
- Push notification: “🏆 New badge unlocked: Iron Warrior (50 classes attended)!”

Badge categories:

Category	Examples
Attendance	First Check-In, 7-Day Streak, 30-Day Streak, 100 Classes, Night Owl (10PM+ workouts)
Class Types	Boxing Pro (20 boxing classes), Yoga Master, HIIT Hero, Spin King/Queen
Social	Gym Buddy (connected with 5 members), Social Butterfly (10 connections), Cheerleader (50 likes given)
Payment	Early Bird (paid before due date), Loyal Member (12 months continuous)
Challenges	Challenge Winner, Top 10 Finisher, Consistency King

Table 21 – continued

Category	Examples
Special	Founder (first 100 members), Beta Tester, Feedback Champion

Badge tiers: Bronze → Silver → Gold → Platinum → Diamond

Why it keeps users sticky: Dopamine hits from achievements. Members chase badges. Shareable = free marketing.

22.2 Monthly Challenges

What it is: Gym-wide or personal challenges with leaderboards.

How it works:

- Owner creates challenge: “March Madness — 20 classes in 31 days”
- Members opt-in (one tap)
- Progress tracked automatically from check-ins
- Live leaderboard: “You’re #3 out of 45 participants!”
- Push updates: “Only 3 classes left to complete the challenge!”
- Completion reward: badge + discount code for next month + shoutout in gym feed

Challenge types:

- Attendance-based (X classes in Y days)
- Streak-based (X consecutive days)
- Class-type based (try 5 different class types)
- Time-based (work out before 7AM for a week)
- Social-based (bring a friend 3 times)

Why it keeps users sticky: Competitive drive. Clear goals. Visible progress. Community participation.

22.3 Member Loyalty Points

What it is: Members earn points for platform activity, redeemable for rewards.

How it works:

- Points earned for:
- Check-in: 10 points
- Class completion: 25 points
- Booking in advance: 15 points
- Referring a friend (who signs up): 500 points
- Writing a class review: 50 points

- Completing a challenge: 200 points
- Streak milestones: 100-1000 points
- Points displayed on dashboard: “★ 2,450 points”
- Redeem for:
 - Free guest pass (500 points)
 - Merchandise discount (1000 points = \$10 off)
 - Free class upgrade (1500 points)
 - Personal training session (3000 points)
 - Month free (5000 points)

Why it keeps users sticky: Tangible rewards for engagement. Members optimize for points. Referrals drive growth.

22.4 Leaderboards

What it is: Public rankings for various metrics.

How it works:

- Multiple leaderboard categories:
 - Most check-ins this week/month
 - Longest current streak
 - Most classes attended (all time)
 - Most challenge completions
 - Most referrals
- Top 10 displayed on member dashboard
- Member sees their rank: “You’re #7 this week!”
- Weekly reset (some), all-time (others)
- Anonymous option: “Member #42” instead of name

Why it keeps users sticky: Competition. Recognition. Social status within gym community.

23. Trainer-Member Interaction

23.1 Trainer Profiles & Booking

What it is: Members view trainer profiles and book personal training sessions.

How it works:

- Member taps “Trainers” tab
- See all gym trainers: photo, bio, specialties, certifications, average rating

- Trainer availability calendar (synced from their schedule)
- Book 1-on-1 session: select date/time, session type, notes
- Payment: charged immediately or added to next bill (configurable)
- Confirmation: push + email with calendar invite
- Reminder: 24 hours + 1 hour before session

Session types:

- Personal training (1-on-1)
- Small group (2-4 members)
- Assessment / goal setting
- Nutrition consultation

Why it keeps users sticky: Direct access to expertise. Personalized service. Trainers become accountability partners.

23.2 Progress Tracking & Goals

What it is: Trainer and member collaboratively track fitness progress.

How it works:

- Trainer sets goals for member: “Lose 5 lbs in 4 weeks”, “Bench press 200 lbs”
- Member logs progress: weight, measurements, personal records, photos
- Trainer reviews, adjusts goals, provides feedback
- Charts show progress over time
- Milestone celebrations: 🎉 Goal achieved! You lost 5.2 lbs!”

Trackable metrics:

- Body weight
- Body measurements (chest, waist, arms, legs)
- Body fat percentage
- Personal records (bench, squat, deadlift, mile time)
- Progress photos (side-by-side comparison)
- Fitness assessments (push-ups in 1 min, plank hold time)

Privacy:

- Progress data visible only to member and their trainer
- Member controls what (if anything) appears on public profile
- Can export data as PDF for personal records

Why it keeps users sticky: Visible progress = motivation. Trainer involvement = accountability. Data = proof of value.

23.3 Trainer Reviews & Testimonials

What it is: Members leave detailed reviews for trainers they've worked with.

How it works:

- After 3 personal training sessions, member prompted: "How's your experience with Marcus?"
- Rating: 1-5 stars
- Categories: Knowledge, Motivation, Punctuality, Communication, Results
- Optional text review
- Review appears on trainer's public profile (anonymized if member chooses)
- Trainer can respond to reviews
- Admin sees all reviews for quality control

Why it keeps users sticky: Quality assurance. Members choose trainers confidently. Trainers strive for better ratings.

23.4 Trainer Content Library

What it is: Trainers create and share workout content with members.

How it works:

- Trainer creates content: workout video, exercise tutorial, nutrition guide, motivational post
- Tags by category: strength, cardio, flexibility, nutrition, mindset
- Members subscribe to favorite trainers
- New content appears in member's "Discover" feed
- Members save favorites to personal library
- Content searchable by keyword, trainer, or category

Content types:

- Video workouts (5-30 min)
- Exercise form tutorials
- Meal prep guides
- Motivational stories
- Live Q&A sessions (scheduled, push notified)

Why it keeps users sticky: Value beyond the gym. Members consume content on rest days. Trainers build personal brands.

24. Staff Collaboration Tools

24.1 Task Management

What it is: Owner/manager assigns tasks to staff with deadlines and priorities.

How it works:

- Owner creates task: title, description, assignee, due date, priority (low/medium/high/urgent)
- Staff sees tasks in their dashboard
- Tap to view details, mark complete, add notes
- Overdue tasks flagged in red
- Owner sees task completion rate per staff member
- Recurring tasks: “Clean equipment every Friday”

Task categories:

- Maintenance (equipment check, cleaning)
- Administrative (update member records, process refunds)
- Member-facing (follow up with expired members, welcome new members)
- Events (set up for seminar, organize challenge)

Notifications:

- Push when task assigned
- Push 24 hours before due date
- Push when marked overdue

Why it keeps staff sticky: Clear expectations. Accountability. Recognition for completion.

24.2 Shift Scheduling & Swap

What it is: Staff schedule with ability to request swaps.

How it works:

- Owner/manager creates weekly schedule
- Staff see their shifts in app calendar
- Staff can request swap: “Can someone cover my Tuesday 6PM shift?”
- Other staff see swap requests, can accept
- Owner approves final swap
- Shift reminders: 2 hours before start
- Late check-in alert: “Marcus is 10 min late for his shift”

Shift types:

- Regular shift
- Class coverage

- Event staffing
- On-call

Why it keeps staff sticky: Flexibility. Staff control their schedule. Reduces no-shows.

24.3 Staff Announcements & Bulletin Board

What it is: Internal communication for staff only.

How it works:

- Owner/manager posts to staff bulletin board
- Rich text, images, pinned posts
- Staff see in their dashboard
- Read receipts: who has seen the announcement
- Comment thread for discussion

Use cases:

- “New cleaning protocol starting Monday”
- “Equipment maintenance this Wednesday — gym closes at 8PM”
- “Team meeting Friday at 9AM”
- “Shoutout to Marcus for highest member retention this month!”

Why it keeps staff sticky: Informed team. Culture building. Recognition.

24.4 Staff Performance Dashboard

What it is: Individual performance metrics for each staff member.

How it works:

- Each staff member sees their own dashboard:
- Hours worked this week/month
- Classes taught
- Member satisfaction rating
- Attendance rate (on-time %)
- Tasks completed on time
- Payroll earned
- Owner sees comparative dashboard across all staff
- Monthly “Staff of the Month” highlighted

Why it keeps staff sticky: Transparency. Recognition. Career growth visibility.

25. Content & Entertainment

25.1 Gym Blog / News Feed

What it is: Curated content feed for members.

How it works:

- Owner/manager or designated content creator publishes articles
- Articles appear in member app's "Discover" tab
- Categories: nutrition, workouts, member stories, gym news, events
- Members can like, save, share to social media
- Push notification for new articles: "New post: 5 Protein-Packed Post-Workout Meals"

Content ideas:

- "Member Spotlight: How Sarah Lost 30 lbs in 6 Months"
- "Trainer Tip: Perfect Your Deadlift Form"
- "Gym News: New Equipment Arriving Next Week!"
- "Recipe: High-Protein Smoothie Bowl"
- "Event Recap: Our First 5K Fun Run"

Why it keeps users sticky: Content consumption on rest days. Community storytelling. SEO value.

25.2 Live Streaming Classes

What it is: Trainers stream classes live for remote participation.

How it works:

- Trainer schedules live stream class
- Members book spot (limited capacity)
- Push notification 15 min before: "Your live stream starts soon!"
- Member joins via app — video stream + real-time chat
- Trainer sees participant count and chat messages
- Class recorded, available on-demand for 7 days
- Members who missed live can watch replay

Live class types:

- Yoga flow
- HIIT workout
- Boxing fundamentals
- Stretching & recovery
- Q&A with trainer

Why it keeps users sticky: Convenience. Members travel but don't miss workouts. Additional revenue stream.

25.3 On-Demand Workout Library

What it is: Library of pre-recorded workouts members can do anytime.

How it works:

- Trainers record workouts, upload to platform
- Organized by: duration (10/20/30/45 min), type (strength/cardio/yoga), difficulty (beginner/intermediate/advanced), equipment needed
- Member filters, selects, presses play
- Video player with: play/pause, skip 10s, fullscreen, cast to TV
- Workout tracking: "You completed 30-Min HIIT with Marcus!"
- Progress saved: workouts completed, total minutes, calories (estimated)

Why it keeps users sticky: Value on rest days. Members use app even when not at gym. Habit formation.

25.4 Music Integration

What it is: Members connect their Spotify/Apple Music for workout playlists.

How it works:

- Member links Spotify account in settings
- "Workout Mode" — auto-plays gym's curated playlist or member's own
- Class-specific playlists: "Boxing Beats", "Yoga Flow", "HIIT Hype"
- Trainer can set playlist for their class
- Members can share playlists with gym buddies
- "What's playing at Iron Pulse right now?" — shows current gym playlist

Why it keeps users sticky: Personalization. Atmosphere. Members associate gym with their favorite music.

25.5 Gym Events & Social Calendar

What it is: Calendar of gym events members can RSVP to.

How it works:

- Owner creates event: title, date/time, location, description, capacity, image
- Events appear in member app's "Events" tab
- Member RSVPs with one tap
- Push reminder 24 hours before
- Check-in at event (QR code or geofenced)

- Post-event: photos shared, recap article, attendee list

Event types:

- Workshop (nutrition seminar, form clinic)
- Social (member mixer, holiday party)
- Challenge kickoff
- Charity event (charity workout, fun run)
- Guest trainer session
- Gym anniversary celebration

Why it keeps users sticky: Community events. Social connections. Memorable experiences.

26. Wellness & Progress Tracking

26.1 Body Metrics Logging

What it is: Members log body measurements and track changes over time.

How it works:

- Member opens “My Progress” tab
- Logs: weight, body fat %, measurements (chest, waist, hips, arms, thighs)
- Optional progress photos (front, side, back)
- Charts show trends: 1 week, 1 month, 3 months, 1 year
- Goal setting: “Target weight: 160 lbs by Dec 31”
- Milestone celebrations: 🎉 You hit your goal weight!”

Privacy:

- All progress data private by default
- Member chooses what to share with trainer
- Photos stored securely, never shared without explicit consent

Why it keeps users sticky: Visible progress = motivation. Data-driven results. Goal achievement.

26.2 Workout Journal

What it is: Members log their own workouts outside of classes.

How it works:

- “Log Workout” button on dashboard
- Select workout type: strength, cardio, flexibility, sport
- Log exercises: name, sets, reps, weight, duration, distance
- Save to journal

- Journal entries feed into progress analytics
- Trainer can view member's journal (if shared)

Quick log templates:

- “Morning Run” — distance, time, pace
- “Chest Day” — bench, incline, flies with sets/reps/weight
- “Yoga at Home” — duration, type, notes

Why it keeps users sticky: Complete fitness picture. Accountability. Trainer visibility into off-day activity.

26.3 Nutrition Tracking

What it is: Members log meals and track nutrition goals.

How it works:

- “Log Meal” button
- Search food database or scan barcode
- Log: meal type, foods, portions, calories, macros (protein, carbs, fat)
- Daily summary: calories in vs goal, macro breakdown
- Weekly trend charts
- Trainer can view nutrition logs (if shared)
- Meal photo logging for accountability

Integration:

- Connect MyFitnessPal for auto-sync
- Import from Apple Health / Google Fit
- Trainer-approved meal plans

Why it keeps users sticky: Holistic health tracking. Diet + exercise = results. Trainer guidance on nutrition.

26.4 Sleep & Recovery Tracking

What it is: Members track sleep and recovery metrics.

How it works:

- Manual log: bedtime, wake time, sleep quality (1-5), notes
- Auto-sync from wearable: Apple Watch, Fitbit, Garmin, Oura Ring
- Recovery score based on: sleep quality, rest day, workout intensity
- Trainer sees recovery data (if shared) to adjust training intensity
- Push: “Your recovery score is low today. Consider a light workout or rest day.”

Why it keeps users sticky: Prevents burnout. Optimizes training. Wearable integration = less friction.

26.5 Habit Tracker

What it is: Members track daily wellness habits.

How it works:

- Pre-built habits: Drink 8 glasses of water, Eat 5 servings of vegetables, Sleep 8 hours, Stretch 10 min, No sugar
- Custom habits: member creates their own
- Daily check-off: tap to mark complete
- Streak tracking per habit
- Weekly summary: “You completed 6/7 habits this week!”
- Push reminders: “Don’t forget to drink water! 💧”

Why it keeps users sticky: Daily engagement. Habit formation. Small wins compound.

27. Community Features

27.1 Member Spotlight

What it is: Gym highlights exceptional members monthly.

How it works:

- Owner/manager selects “Member of the Month”
- Featured on gym feed, app banner, and social media
- Interview-style post: “Meet Sarah — 50 classes in 60 days!”
- Member gets exclusive badge + reward (free month, merch, etc.)
- Other members can congratulate and react

Selection criteria:

- Most attendance
- Biggest transformation
- Challenge winner
- Most referrals
- Community contributor

Why it keeps users sticky: Recognition. Aspiration. Community celebration.

27.2 Referral Program

What it is: Members earn rewards for referring friends.

How it works:

- Member taps “Refer a Friend” → unique referral link
- Share via: text, email, social media, QR code
- Friend signs up using link → both get reward
- Rewards:
 - Referrer: 500 loyalty points + \$10 credit
 - Friend: \$20 off first month
- Track referrals: “You’ve referred 3 friends. 2 more for a free month!”
- Leaderboard: “Top Referrers This Month”

Why it keeps users sticky: Viral growth. Members become ambassadors. Rewards for advocacy.

27.3 Gym Merchandise Store

What it is: In-app store for gym-branded merchandise.

How it works:

- Owner uploads products: t-shirts, water bottles, gym bags, resistance bands, supplements
- Members browse, add to cart, checkout
- Payment via Stripe (same as membership)
- Loyalty points redeemable for discounts
- “Member Exclusive” items (only visible to active members)
- Order tracking + delivery notifications

Why it keeps users sticky: Brand affinity. Additional revenue. Members wear gym brand = free advertising.

27.4 Member Polls & Surveys

What it is: Owner polls members for feedback and decisions.

How it works:

- Owner creates poll: “What new class should we add? A) Pilates B) Kickboxing C) CrossFit”
- Members vote in app
- Results visible in real-time
- Anonymous option available
- Push: “New poll: Help us choose our next class!”

Survey types:

- Class satisfaction

- Trainer feedback
- Facility improvement
- Event interest
- New equipment requests

Why it keeps users sticky: Members feel heard. Democratic gym culture. Better decisions from data.

27.5 Gym Buddy Matching

What it is: AI-powered matching of members with similar goals and schedules.

How it works:

- Member completes profile: goals, preferred workout times, class types, experience level
- AI suggests gym buddies: “You and Marcus both love 6AM boxing and want to build muscle!”
- Member sends connection request
- Matched buddies see each other’s schedules (if shared)
- Coordinated booking: “Book this class with your buddy?”
- Buddy streaks: “You and Marcus have worked out together 5 times!”

Why it keeps users sticky: Accountability. Social connection. AI personalization.

28. Notification & Alert System

28.1 Smart Notification Engine

What it is: Intelligent, context-aware notifications that don’t spam.

How it works:

- Member controls notification preferences per category
- Smart timing: no notifications during sleep hours (respect timezone)
- Batch non-urgent notifications into daily digest
- Urgent notifications (class cancellation, payment due) break through immediately

Notification categories:

Category	Examples	Priority
Payments	Payment due, payment received, receipt approved	High
Classes	Class reminder, class cancelled, booking confirmed	High
Social	Buddy check-in, new follower, message received	Medium
Achievements	Badge unlocked, streak milestone, challenge update	Medium

Table 22 – continued

Category	Examples	Priority
Content	New article, live stream starting, trainer post	Low
Promotions	Flash sale, new plan, referral reward	Low
System	Password changed, new login, security alert	High

28.2 Class Reminders

What it is: Multi-stage reminders for booked classes.

How it works:

- 24 hours before: “Your Boxing class is tomorrow at 6PM!”
- 2 hours before: “Boxing Fundamentals starts in 2 hours. Don’t forget your gear!”
- 15 minutes before: “Class starts soon! Check in when you arrive.”
- Post-class: “Great workout! Rate your experience.”
- Missed class: “We missed you at Boxing today. Book your next class!”

Why it keeps users sticky: Reduces no-shows. Creates anticipation. Prompts rebooking.

28.3 Re-engagement Campaigns

What it is: Automated campaigns to win back inactive members.

How it works:

- System identifies inactive members (no check-in for 7, 14, 30 days)
- Triggered email/push sequence:
- Day 7: “We miss you! Here’s what’s happening at the gym this week.”
- Day 14: “Your buddy Marcus has been crushing it. Come back!”
- Day 21: “Special offer: 50% off your next month if you reactivate now.”
- Day 30: “Last chance — your membership expires in 3 days.”
- Owner can customize messages and offers per segment
- A/B test subject lines and offers

Why it keeps users sticky: Proactive retention. Personalized outreach. Data-driven win-back.

28.4 Birthday & Anniversary Celebrations

What it is: Automated celebrations for member milestones.

How it works:

- Birthday: push + email + in-app banner + free guest pass

- Gym anniversary (1 year member): 🎉 Happy 1-Year Anniversary! You've attended 200 classes!"
- Streak anniversaries: "30-day streak! You're unstoppable!"
- Membership renewal: "Thanks for renewing! Here's a loyalty bonus."

Why it keeps users sticky: Personal touch. Makes members feel valued. Memorable moments.

29. Smart Recommendations

29.1 Class Recommendations

What it is: AI suggests classes based on member behavior and preferences.

How it works:

- Analyzes: past bookings, attendance patterns, preferred times, favorite trainers, fitness goals
- Suggests: "Based on your love for evening boxing, try Kickboxing with Marcus on Thursday!"
- "Classes you might like" section on dashboard
- "Trending at your gym" — popular classes this week
- "Because you liked Yoga, try Pilates"

Why it keeps users sticky: Discovery. Variety. Members try new things they wouldn't have found.

29.2 Trainer Recommendations

What it is: Suggests trainers based on member goals and schedule.

How it works:

- "Looking to build muscle? Train with Marcus — 95% member satisfaction!"
- "Your schedule fits Sarah's 7AM sessions perfectly."
- "Members who train with Alex see 2x faster results."
- Shows trainer availability matching member's free time

Why it keeps users sticky: Right fit = better results. Members find their ideal trainer faster.

29.3 Plan Upgrade Recommendations

What it is: Suggests plan upgrades when member outgrows current plan.

How it works:

- Member approaching class limit: "You've used 8 of 10 classes. Upgrade to Unlimited for just \$30 more!"
- Member consistently attending: "You're here 5x/week — Unlimited plan saves you \$50/month!"
- Member trying new class types: "Love trying new classes? Upgrade for access to all 15 class types!"
- One-tap upgrade with prorated billing

Why it keeps users sticky: Right-sizing plans. Members feel understood. Revenue optimization.

29.4 Workout Recommendations

What it is: Suggests workouts based on member's current state.

How it works:

- Post-class: "Great HIIT session! Tomorrow try Yoga for recovery."
- Rest day: "It's your rest day. Try a 10-min stretching routine!"
- Goal-based: "2 weeks until your 5K. Here's a training plan!"
- Weather-based: "Rainy day? Try this 20-min home HIIT workout!"
- Recovery-based: "Your recovery score is low. Light cardio recommended today."

Why it keeps users sticky: Personalized guidance. Members trust the platform. Better results = retention.

29.5 Nutrition Recommendations

What it is: Suggests meals and recipes based on workout and goals.

How it works:

- Post-workout: "You just crushed leg day! Try this high-protein post-workout shake."
- Goal-based: "Losing weight? Here's a 500-calorie dinner recipe."
- Time-based: "Quick breakfast idea: 5-min protein oats"
- Trainer-approved: "Marcus recommends this meal plan for muscle gain."
- Seasonal: "Summer smoothie recipes from our nutritionist"

Why it keeps users sticky: Holistic health. Members see the platform as a complete wellness tool.
